3. Assessment of the Company's liquidity

The current ratio as at the end of the period under review was equal to 0.9; at the start of the period it was 1.15. 4. Review of the compliance of the financial and tax accounting methods used with the requirements of the Accounting Policy, and the timely provision of financial statements.

Open Joint Stock Company “Oil Company “LUKOIL”

Summary of 2013 performance results and main objectives for 2014

In 2013 OAO “LUKOIL” (hereinafter also the “Company”) successfully reached its objectives, confirming its competitiveness, high-level efficiency, and reliability, which made it possible to increase shareholder return by increasing dividends to RUB 110/share¹ (+22% compared to 2012). Dividend yield may equal 5.5%.

Geological exploration and oil and gas reserves

In terms of exploration, 2013 was one of the Company’s most successful years: nine deposits and 43 occurrences were discovered, which is the best result in the past five years.

When performing exploration work, the Company pays special attention to the use of innovative technologies, which makes it possible to significantly increase the efficiency of exploration work. The success rate for the Company’s exploratory drilling in 2013 was 73%.

The Company entered a promising new region in 2013 – the Norwegian sector of the Barents Sea, which has high development potential.

The Company’s proven hydrocarbon reserves as at 31 December 2013 are 17.4 billion barrels of oil equivalent. More than 100% of production was replaced by increases in proven reserves in 2013. Through exploratory drilling in traditional operating regions, accelerated development of deposits discovered in 2013, and asset acquisitions, the increase in the Company’s proven reserves in 2013 was 822 million BOE. Reviews of previous estimates led to an increase in reserves by 116 million BOE. This was possible due to improvements in the technology for developing existing deposits, and also taking into account the tax concessions provided by the Russian Government for difficult-to-recover reserves and offshore reserves.

Oil and gas production

The LUKOIL Group (hereinafter also the “Group”) increased its daily average oil production by 1.3% as result of new acquisitions and organic growth in the Caspian, in the Komi Republic, and in Perm. Oil production (including the Company’s share of the production of associates) was equal to 90.8 million tonnes (670.1 million barrels).

The Company is working actively to start production at new deposits. Over the course of 2013, hydrocarbon production began at nine new deposits in the Russian Federation (not including the acquisition of ZAO Samara-Nafta). More than 16 of the Company’s deposits in the Russian Federation increased their oil production in 2013 compared to 2012 by more than 50 thousand tonnes. As result of the growth of production drilling, significant increases were achieved in oil production at the Yu. Korchagin deposit (578 thousand t), the Vostochno-Lambeyshorskoye deposit in Komi (482 thousand t), and the Vostochno-Perevalnoye deposit in Western Siberia (249 thousand t).

A great achievement of the Company was to slow the rates of decline in production at mature deposits in Western Siberia, which are in the final stage of development.

In the Caspian Sea, the Company also achieved impressive results: hydrocarbon production at the Yu. Korchagin deposit increased significantly, and the first stage of development was completed at the region’s largest deposit, the V. Filanovsky deposit.

In Iraq, the infrastructure of the West Qurna-2 deposit went into its final stage of preparations, with many facilities necessary to begin production being completed.

Oil refining

Russian enterprises of the refining block achieved positive results in 2013, not only due to the favourable external situation, but also through their high level of competitiveness. All of the Company’s refineries are undergoing comprehensive modernization. Among other things, construction continued on

a coking unit in Perm, a hydro-cracking unit in Volgograd, and a catalytic cracking unit in Nizhny Novgorod. Commissioning of these units will make it possible to ensure adequate growth in the Company's cash flow.

Due to continuing modernization, the depth of processing at Russian refineries reached 75.7%, fuel oil production was reduced by 1%, and high-octane gasoline accounted for 99.9% of the total production of automotive gasoline.

Compared to 2012, production of petroleum products at subsidiary and associated refineries of the Group increased by 0.7%, including an increase of 2.3% in the production of petroleum products at Russian refineries.

Power generation industry

The Company continued to develop the power generation sector in 2013 in accordance with the strategic development programme. Total output of electrical power in 2013 was 15.7 billion kWh. Total output of thermal energy was 13.6 million GCal, including 12.5 million GCal in Russia. The volume of thermal energy and electrical power produced was determined proceeding from the conditions on the power generation market.

In 2013, the Company commissioned two steam gas units in Astrakhan, with a total capacity of 235 MW, and six gas-turbine units were installed in Rostov and Stavropol, with a combined capacity of 10.5 MW. In Romania, construction began of a wind power station with a capacity of 84 MW, and a project was initiated to build a solar power station at the idle grounds of the refinery in Ploesti.

Oil and gas sales

The Company's aggregate sales of oil, including deliveries for refining at the Company's own refineries and associate refineries, were equal to 105 million tonnes in 2013. At the same time, in connection with the high efficiency of oil supplies on the domestic market compared to the majority of deliveries abroad, significant volumes of oil were rerouted from inefficient export deliveries to the Company's refineries and sales on the Russian domestic market. Exports decreased by 8.4% in 2013, and were equal to 31.8 million tonnes.

The Company exported 6.3 million t of oil through its own terminals, an increase of 50%. Shipments through the Varandei terminal grew by more than 70%, due to the commissioning of the new Kharyaga–Yuzhnoye Khylochuyu oil pipeline.

An important achievement for the Company was the organisation of export shipments through the East Siberia–Pacific Ocean system to the port of Kozmino, which made it possible to sell light crude while maintaining its quality and with greater efficiency than traditional exports to the West.

Sale of oil products

As it possesses a well-diversified distribution network (more than 5,867 filling stations and 166 oil depots in 27 countries), LUKOIL sells its own petroleum products on the retail market. The Company increased sales of petroleum products by 2.1% in 2013. The greatest share of the increase came on the Russian market (+3.4% compared to 2012) due to the increased demand for high-quality fuel.

Average daily sales per filling station in Russia rose to 12.8 tonnes, due to the introduction of highly efficient stations and the optimization of money-losing stations, reconstruction of older stations, and also the implementation of client loyalty programs (LICARD). Sales of non-fuel goods rose by 6%.

Corporate responsibility

For more than 20 years, we have prudently used our natural and human resources, which is the underlying reason for our success. Among Russian oil and gas companies, OAO "LUKOIL" is the only operator of offshore deposits, where strict compliance with the zero-emission principle ensures the preservation of the natural environment.

In 2013, the Company focused its attention on issues of health, safety and the environment in its regions of presence.

The Company has invested approximately USD 4 billion in environmental measures over the past five years, specifically, in preventing atmospheric pollution, including by improving the utilization of associated petroleum gas (APG) and also accident prevention and clean-up operations.

Maintaining its dedication to the principles of social responsibility, in 2013 OAO “LUKOIL” continued its sponsorship and charitable activities, supporting educational, medical and sports institutions and promoting preservation of the cultural and historical heritage in its regions of presence.

Without doubt, a key factor in the Company’s successful work is the integrated work of its entire workforce. Strong financial indicators in 2013 allowed us to index employee wages and pay annual bonuses. A key priority for the Company is to create conditions where every employee can realize their full potential.

Corporate governance

A stable shareholder structure creates the foundations for high standards of corporate governance and maintaining continuity, which is confirmed by highest reliability ratings. In 2013, the international agencies Fitch and Standard & Poor’s raised the Company’s ratings to the level of BBB with a stable forecast.

Stock market

Over the course of 2013, under pressure from instability on commodity markets, Russian stock indexes traded within a fairly narrow price range. In addition there was a significant outflow of capital from developing markets to developed markets.

The MICEX index rose only 2.0% from the start of the year. Trading in OAO “LUKOIL” shares followed the general trend, with quotations on MICEX growing only 2.0% over the year.

As at 2013 year end, major investment banks with total assets of more than USD 9 trillion under management made a “buy” recommendation for Company shares.

The Company’s main objectives for 2014 are:

The Company’s strategy consists in seeking to increase long-term shareholder value and shareholder return. By creating effective new points of growth for the business for steady future development, the Company is currently going through the peak of the investment cycle. Investments in new projects are aimed at reinforcing the raw materials base, and at modernising refining capacities to improve efficiency.

In future, the Company will continue to work to achieve its goals and objectives, creating a highly profitable business that will make it possible to derive maximum benefits from the existing market situation and to ensure a high return for shareholders.
